Water System Update

March 3, 2017

Dear SLCWD Customer:

On March 2nd the District was able to resume use of the Lake Serena intake pipe and discontinued use of the backup well. The lake water temperature has increased slightly allowing the treatment process to be effective and the filtered water meets all drinking water standards. The water is still very cold, approximately 1° Celsius, which requires the Operators limit the pumping rate to about one-half the normal amount. While the treatment plant's output is somewhat greater than the well's, it is absolutely necessary that you and your family continue to conserve water to ensure there is a sufficient supply for the entire community.

Thank you in advance for your cooperation in reducing water use to the minimum necessary. The District will post additional updates on its website as they become available. If you have any questions or concerns, please contact the office at 530-426-7800.

Sincerely,

Bill Quesnel PE
General Manager
